Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

(Currently Amended) A method comprising:
obtaining data corresponding to one or more data dimensions from a data source;
generating a smart radar chart graphical user interface, the smart radar chart graphical
user interface comprising a visual representation of the obtained data corresponding to the one or
more data dimensions,

wherein each data dimension is displayed radiating from a central point, and data corresponding to a data dimension is displayed at a position indicating a value of the data in relation to a reference value to enable identification of an exception, wherein the reference value comprises an average value of measured data corresponding to a data dimension; and rendering the smart radar chart graphical user interface.

- 2. (Original) The method of claim 1 wherein generating the smart radar chart graphical user interface comprises generating a first smart radar chart graphical user interface having a first level of detail of the obtained data.
- 3. (Original) The method of claim 2 further comprising generating a second smart radar chart graphical user interface comprising a second level of detail of the obtained data for one or more dimensions displayed in the first smart radar chart graphical user interface.
- 4. (Original) The method of claim 3 wherein generating a second smart radar chart comprises generating a second smart radar chart in response to user manipulation of an input device.

Serial No.: 10/697,253

Filed : October 31, 2003

- 5. (Original) The method of claim 1 wherein obtaining data comprises obtaining data from a remote data source.
- 6. (Original) The method of claim 5 wherein obtaining data comprises obtaining data using a communications link.
- 7. (Original) The method of claim 1 wherein obtaining data comprises periodically obtaining data.
- 8. (Original) The method of claim 1 wherein obtaining data comprises continuously obtaining data.
- 9. (Original) The method of claim 1 wherein obtaining data comprises obtaining data in response to an occurrence of an event.
 - 10. (Original) The method of claim 9 wherein the event comprises a user input.
 - 11. (Cancelled).
- 12. (Original) The method of claim 11 wherein the reference value comprises a dynamically computed value.
 - 13. (Cancelled).
 - 14. (Cancelled).

Serial No.: 10/697,253 Filed: October 31, 2003

15. (Original) The method of claim 1 wherein the reference value comprises a predetermined value.

- 16. (Original) The method of claim 1 wherein generating the smart radar chart further comprises normalizing the data.
- 17. (Original) The method of claim 16 wherein generating the smart radar chart further comprises displaying the data in relation to a representation of the reference value.
- 18. (Original) The method of claim 16 wherein the reference value is dynamically computed based on the obtained data.
- 19. (Original) The method of claim 1 wherein generating the smart radar chart further comprises visually indicating a difference between the data and the reference value.
- 20. (Original) The method of claim 1 further comprising generating an audible alert indicating presence of an exception.
 - 21. (Currently Amended) An apparatus comprising:

a data source configured to provide data to a smart radar chart generator, the smart radar chart generator configured to:

obtain data corresponding to one or more data dimensions from the data source; generate a smart radar chart graphical user interface, the smart radar chart graphical user

interface comprising a visual representation of the obtained data corresponding to the one or more data dimensions,

wherein each data dimension is displayed radiating from a central point, and data corresponding to a data dimension is displayed at a position indicating a value of the data in

relation to a reference value to enable identification of an exception, wherein the reference value comprises an average value of measured data corresponding to a data dimension; and enable rendering of the smart radar chart graphical user interface.

- 22. (Original) The apparatus of claim 21 wherein the smart radar chart generator generates a first smart radar chart graphical user interface having a first level of detail of the obtained data.
- 23. (Original) The apparatus of claim 22 wherein the smart radar chart generator is further configured to generate a second smart radar chart graphical user interface having a second level of detail of the obtained data for one or more dimensions displayed in the first smart radar chart graphical user interface.
- 24. (Original) The apparatus of claim 21 wherein the smart radar chart generator is configured to obtain data from a remote data source.
- 25. (Original) The apparatus of claim 21 wherein the smart radar chart generator is configured to generate a representation of the data in relation to a representation of the reference value.
- 26. (Original) The apparatus of claim 25 wherein the smart radar chart generator is configured to generate a representation of the data at distance proportional to a magnitude of a deviation of the data from the reference value.
- 27. (Original) The apparatus of claim 21 wherein the smart radar chart generator is configured to generate a representation to visually indicate a difference between the data and the reference value.

28. (Currently Amended) A graphical user interface that enables perception of information regarding one or more data dimensions, the interface comprising:

a data presentation area;

a visual representation within the data presentation area based upon data corresponding to one or more data dimensions.

wherein each data dimension is displayed radiating from a central point in a common plane, and data corresponding to a data dimension is displayed at a position indicating a value of the data in relation to a reference value to enable identification of an exception, wherein the reference value comprises an average value of measured data corresponding to a data dimension.

- 29. (Original) The interface of claim 28 wherein the visual representation comprises a first representation, the first representation having a first level of detail of the data.
- 30. (Original) The interface of claim 29 further comprising a second representation, the second representation having a second level of detail of the data for one or more dimensions displayed in the first representation.
- 31. (Original) The interface of claim 30 wherein the second representation is activated in response to user selection of a designated portion of the first representation.
- 32 (Original) The interface of claim 31 wherein the user selection is inferred based upon a position of an input device relative to a user interface.
- 33. (Original) The interface of claim 31 wherein the user selection comprises an overt selection activity using a user input device.
- 34. (Original) The interface of claim 30 wherein the second representation is rendered in a pop-up window.

Serial No.: 10/697,253 Filed: October 31, 2003

Page: 7 of 11

35. (Original) The interface of claim 30 wherein the second representation is rendered as an overlay to the first representation.

- 36. (Original) The interface of claim 30 further comprising automatically closing the second representation.
- 37. (Original) The interface of claim 36 wherein the second representation is automatically closed based upon an expiration of a predetermined length of time.
- 38. (Original) The interface of claim 36 wherein the second representation is automatically closed based upon an inferred intent to close the second representation.
- 39. (Original) The interface of claim 38 wherein the intent to close the second representation is inferred based upon a position of a user input device.
- 40. (Original) The interface of claim 38 wherein the intent to close the second representation is inferred based upon an input of a user input device.
 - 41. (Cancelled).
- 42. (Original) The interface of claim 28 wherein the reference value comprises a predetermined value.
- 43. (Original) The interface of claim 28 wherein the data is displayed in relation to a representation of the reference value.

Applicant: Peter S. Ebert Attorney's Docket No.: 13909-125001 / 2003P00496 Serial No.: 10/697,253

Filed : October 31, 2003 Page : 8 of 11

44. (Original) The interface of claim 43 wherein the representation of the reference value comprises a reference circle.

- 45. (Original) The interface of claim 43 wherein the data is displayed at a distance proportional to a magnitude of a deviation of the data from the reference value.
- 46. (Original) The interface of claim 28 wherein the data is displayed to visually indicate a difference between the data and the reference value.
- 47. (Original) The interface of claim 28 wherein a summary indicator is rendered based on the value of the data.
- 48. (Original) The interface of claim 28 further comprising an audible representation corresponding to the presence of an exception.
- 49. (New) The method of claim 1, wherein generating the smart radar chart graphical user interface further comprises displaying positive exceptions in a different color from negative exceptions.
- 50. (New) The apparatus of claim 21, wherein the smart radar chart generator is further configured to display positive exceptions in a different color from negative exceptions.
- 51. (New) The interface of claim 28, wherein positive exceptions are displayed in a different color from negative exceptions.
